Rhode Island Medical Information Security and Compliance Forum

Join us for an evening packed with valuable insights into the world of Electronic Health Records (EHR). Whether you are taking the first steps in initiating an EHR program or a seasoned user with a well established EHR system in place, this event is for you.

Those presenting at the forum are EHR experts and healthcare providers who have successfully implemented EHR systems in their practices.

Together we will help to:

- Break down barriers for those who haven't yet implemented EHR systems into their practice
- Highlight the various liability risks associated with established EHRs, including data security
- Provide education on how to reduce liability exposure and get return on investment while maintaining high quality patient care

Agenda

Registration and Italian deli buffet is offered 6pm-7pm.

Two sessions will run concurrently. At the end of each presentation a short break will allow guests to relocate as desired.

Guests are invited to visit the exhibitor hall which will be open throughout the evening.
